🔧 Update on our FDCA Flagship Plant in Delfzijl – Titanium welding fix completed.

We're pleased to share that the titanium weld repair program at our FDCA Flagship Plant has been successfully completed. This important milestone confirms that the previously identified construction-related issues has now been fully resolved after comprehensive inspection and testing of all titanium welds.

The remediation work was carried out in close cooperation with [SRI Speciaal Roestvrijstaal Industrie B.V.](#), under the supervision of [Bilfinger](#), and demonstrates the strength of regional collaboration and technical expertise in the Northern Netherlands.

A huge thank you to SRI for the outstanding collaboration. In a very short timeframe, SRI trained more than 30 welders and weld fitters to work with titanium and completed over 3,000 titanium welds for this repair program. An impressive achievement that truly highlights craftsmanship, dedication, and teamwork.

Meanwhile, commissioning activities continue. Utilities and the Sugar DeHydration unit are operational, and we remain focused on the final commissioning and start-up steps for the Oxidation and Purification units. Our expected timelines for completion of start-up mid 2026 and commercial sales in the second half of 2026 remain unchanged.

What a fantastic collaboration, and a great example of how expertise and partnership drive progress. 🙌
